Abstract-

Alfred Tennyson –

“The old order changeth yielding place to new and God fulfills himself in many ways lest one good custom should corrupt the world.”

We can say old policies and systems keep on changing and new policies and systems take their place because along with the old systems some such defects in customs start arising in those systems, due to which the whole society may be contaminated. In reality this statement is absolutely true because what is right today may be wrong for tomorrow's people in tomorrow's environment because systems, society are changing. If we talk about the field of education, then something similar applies to this field as well.

When the Act of Education came into force in the country, it made education as fundamental right for the children from 6 years to 14 years of age. In order to bring quality in the field of continuous education, many programs are being run by the state government, the central government, many policies are being made, but in spite of all these new challenges and problems keep coming up in the field of education, But if we want to give quality to our education system then we should Incorporate moral values in education, we should use art and technical integrated techniques in education, and we should provide vocational education to our children so that they can contribute in Indian economy and in development of nation.

Incorporation of moral values for quality development in education-

A teacher is such a person who teaches us the meaning of life, develops our moral and mental, so it becomes very important for every teacher not to limit the children only to bookish knowledge, but is also to give them practical knowledge and moral development. Presently, this problem is often seen that as the means of comforts are increasing, somewhere there is a decrease in the moral and character development of the children, they are going down and in such a situation, it is the responsibility of the teachers. It becomes that they give moral education to their students as well as develop their character.

At present, where the decline of moral values is becoming continuous, the meaning of living life has changed, somewhere our education system is also responsible for this and to avoid this problem, development of moral values by teachers in schools, it becomes very necessary to give moral and practical education to the children.

At present, a teacher is such a person through whom qualities like kindness, equality, affection, humility, discretion, forgiveness, penance, sacrifice, and patriotism can be included in the students. Various types of moral values can be developed in the students. Therefore, it is necessary that character development in the students should also be done by the teachers and importance should also be given to this. It is the responsibility of a teacher to play an important role in improving the personality of his students without any kind of discrimination. A teacher plays a variety of roles in a student's life. He provides information to his students about different subjects as an expert and also sometimes as a friend. He also understands right from wrong. Quality of education is currently a big problem in the education sector. Education has been limited only to the competition of getting the maximum percentage. While it is necessary that keeping in mind the present conditions, education should give such a future to the children so that they can make a positive contribution in the country's economy by being self-reliant. He could give his full cooperation in the progress of the country. Education should be such that it prepares children from the very beginning to stand on their own feet and make them financially independent as well. Keeping these things in mind, changes are being brought in the education sector, many such things are also being taken care of under the new education policy. Bringing quality in the field of education is not a matter of one person, but it will be possible only with a collective effort, in which cooperation of school management, student, student's family, teacher, government, all is necessary.

Before 1976, education used to be the responsibility of the states only, but after the 42nd Constitutional Amendment in 1976, five subjects were removed from the state list and included in the concurrent list, in which education was also included.

And the states work together it is noteworthy that Quality in education is a big challenge in India, very few Indian educational institutions find a place in the top 200 world rankings.

Secondary education (9th or 10th) is very important from the point of view of education, because from these classes the student is prepared to go to the world of higher education.

There is a great need in the current education policy to bring quality in education, education should be such that the country's economy gets high, poverty is reduced from the country and children become financially self-sufficient as well as positive in the country.

Somewhere in the area people need to change their thinking too.

If we talk about parents, they often think that quality education means that children are getting maximum percentage, then the child's education is having quality. At the same time, many teachers also support the fact that if children bringing high marks in their studied subject then they are providing qualitative education which is not correct because after bringing high percentage also if in future they won't be able to get employment or will not be able to contribute in economy then their high percentage are good for nothing.

Linking education with vocational education- If we really want that the quality of teacher education given to the students is complete and they can be made self-reliant through education and can be made capable of contributing to the country's economy, then we should

Somewhere business has to be linked with education and keeping this in mind, the New Education Policy 2020 has also been prepared.

The government has approved the National Education Policy 2020, the new education policy will replace the 34-year-old National Education Policy 1986. The year is the third education policy of India after 1968 and 1986.

The aim of the education policy is to pay special attention to issues like access, equality, quality and other teaching responsibilities of education, Therefore, it is expected that quality will be included in education from the aspect of new education policy.

Role of art and technology in education quality-

At present, where students are becoming smart, it is necessary that the teachers who teach them are also smart and technical education is very important for them to become smart. Educational technology helps in making teaching, training effective.

Educational technology is helpful to every aspect of education and every person related to education in one way or the other. It helps teachers, learners, administrators, examiners, curriculum makers, education planners and all people in the process of teaching-learning to do their work and work.

Helps in achieving efficiency.

Practical education can be imparted to the students through technical medium. The objective of technical education is to prepare the students for a professional productive life.

The purpose of art teaching is not to create an artist, but to develop knowledge of art and artistic behavior, for which no other art subject is required, but under this, efforts should be made to explain every subject of the student by connecting it with art. Nowadays, the Central Board of Secondary Education is giving a lot of emphasis on the education of tomorrow.

Tomorrow provides language for expression. This expression can be in the form of art like painting, photography, sculpture, dance, music, theatre, etc.

And when any subject is taught through all these arts, then it is understood by the students very quickly, along with the students, art also develops inside the students.

So we can say that in order to make education more interesting we must use art and technological integrated techniques.

Conclusion- In the era of ever-increasing cut-throat competition, it is very necessary that when a student passes out from school and steps into practical life, he should have a clear idea of his career after studies so that he can become positively self-reliant and contribute to the progress of the country.

We can give our full cooperation in this as well as play a positive role in the progress of the nation and in this way we can reduce the crime rate in the country, reduce poverty and make the country self-reliant.
