ABSTRACT

Mainstream scientists feel that protecting workers' lives in the workplace is crucial, and the Bhopal tragedy in India highlights how significant this fact is. As a result, review have been focused on developing standards to prevent such tragedies and address employee safety and occupational health. The purpose of this essay is to examine and attempt to put OHSAS 18001:2007's criteria into practise in an Indian university. OHSAS 18001 is designed to assist organisations in managing and controlling their occupational health and safety hazards and enhancing their performance in these areas. They can accomplish this goal by creating occupational strategy. By March 2021, organisations with OHSAS 18001 certification could convert to ISO 45001 and keep their prestigious certification. The Institutional Theory, Normal Accident Theory, and High Reliability Theory are the three theoretical frameworks used in this article to analyse the effects of OHSAS 18001 on operational performance. We also look into how complexity and coupling affect the connection between operational performance and OHSAS 18001 standards.. Based on a sample of 211 publicly traded manufacturing companies in the United States that have OHSAS 18001 certification, we find that certification results in appreciable increases in abnormal performance in terms of safety, sales growth, labour productivity, and profitability, and that these advantages grow as complexity and coupling increase.

Keywords: Occupational Health and Safety (OHS), OHSAS 18001:2007, ISO 45001, Operational Performance, Institutional Theory, Safety Perfoermace, Manufacturing

I. INTRODUCTION-

The internationally acknowledged criteria for monitoring occupational health and safety is OHSAS 18001⁽¹⁾. The achievement and demonstration of sound occupational health and safety performance by different types of organisations is more important⁽²⁾. They carry out this action in light growing through laws⁽³⁾. The creation of economic policies encourages safe operations and procedures. However, OHSAS 18001 is important for maintaining an organization's longevity, good an health and integrity. It is not simply about protecting people⁽³⁾. This mannual will help us Understanding how BS OHSAS 18001 creates a safe workplace, how risk may support accident and any legal validation, and how it enhances the company brand by demonstrating commitment to best practices⁽⁴⁾.

To date, the standard has assisted businesses of all sizes and across all industries putting in place structured management frameworks to reduce operational costs and consumer working requirements⁽⁵⁾. Through training. Advice, independent evolution. BSI can help us along by using OHSAS 18001 to manage your risk and provide a safer future⁽⁶⁾

Understanding the core reason OHSAS 18001 is significant: one of the biggest issues facing organisations today is maintaining safety and preventing injuries at work^(7,8). This can improve people lives by improving our company's ties with clients, the general public, and the community at large⁽⁹⁾.

These segments follow a Plan-Do-Check-Act cycle that utilises these aspects to introduce change into the organisation structure in order to spur and sustain advancements inside the system⁽¹⁰⁾.

OBJECTIVE-

- The recognition that Comes with being among those Companies that Care about the health & safety of people is one of the main objective of implementing an OH&MS.

DEFINATION

- OHSMS is described by Gallagher, as a combination of planning & review the management organisation structure, the consultative arrangement & particular programme element that function in concert to enhance health and safety at work⁽¹¹⁾.
- OH&SMS according to the international labour organisation is a collection of cooperating element that works together to formulate OHS policy⁽¹²⁾.

SCOPE-

The Standards for an occupational health & solely managemen + system are outlined in this OHSAS standard. OH&S risks & enhance it's OH&S effectiveness. It does not Specify OH&S performance and for creating management system⁽¹³⁾. This OHSAS standard applicable to any organization that wishes⁽¹⁴⁾

Conformity of the standard is done by -

- i) Make Self declaration & self a determination.
- ii) 4 Its confirmation by parties having an interest in organization.
- iii) Make registration of its OHSMS by external organization.

II. STEPS Required For OHSAS (15,16,17,18)

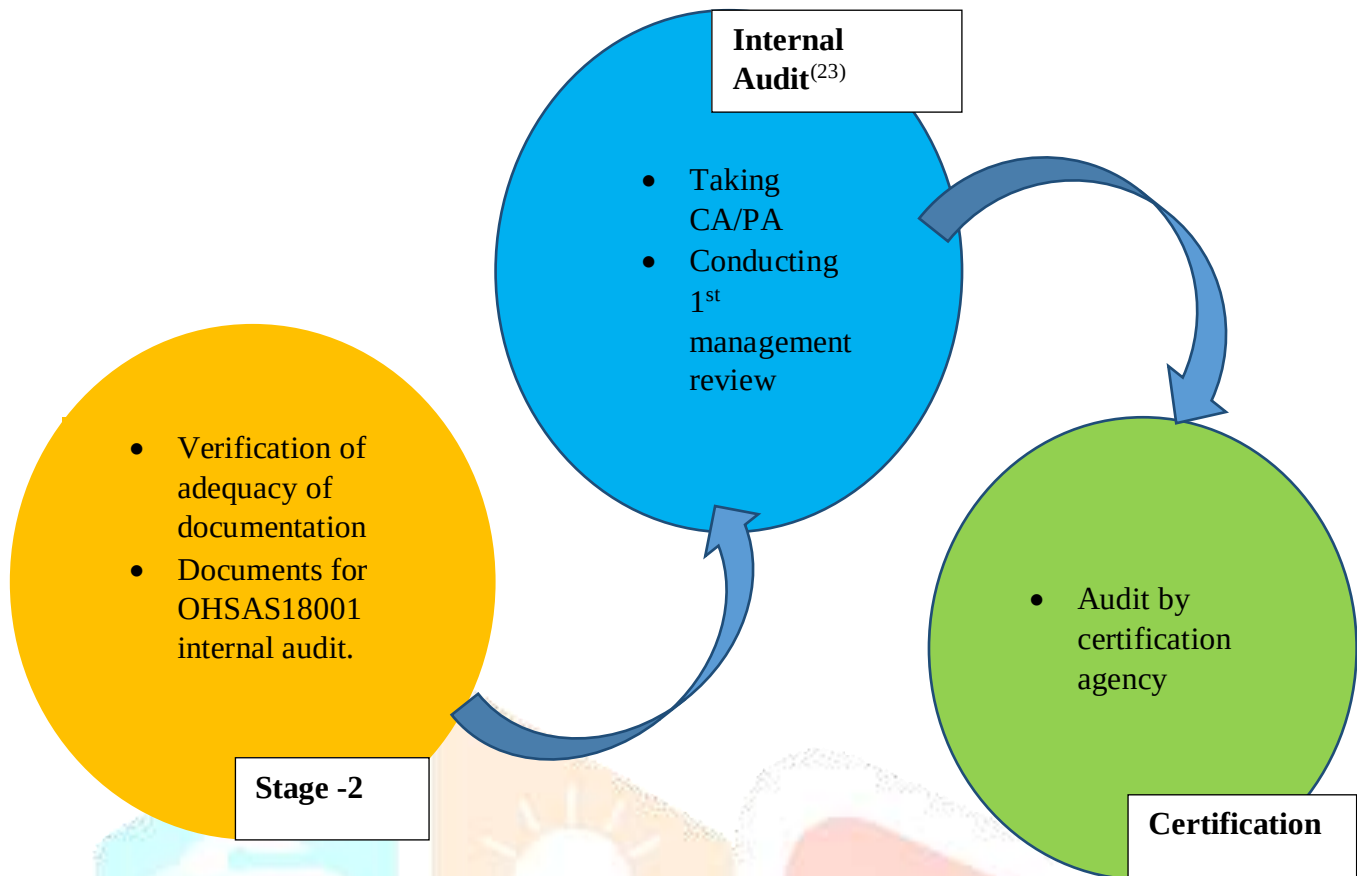

1) General Requirement	This shows that maintaining OH& SMS is intended to encourage improvement rather than being a one-time task to be completed and then forgotten.
2) OH&S Policy	- The overarching objectives for the occupational health and safety management system are determined in part by the occupational health and safety policy. - The company's pledge to adhere to legal standards, prevent injury and ill health, and consistently improve is included in the policy. - Furthermore, it provides a general foundation for establishing OH & MS objectives.
3) planning	- The OHSAS 18001 preparation process consist of three steps . - The organisation must first determine the risk and hazards for each workplace. - The business must then determine the rules and regulations that apply to the identified risk and operational procedures and make sure that they should understood and followed. - Last but not least ,goals and initiatives for enhancing occupational health and safety must be established ,together with the necessary resources.
4) Implementation and operation	There are several factors to take into account for this part ,starting with how resources ,roles, duties, and powers are

	disturbed . • Once those are established ,we must be sure that OH&SMS is operating correctly by establishing expertise ,learning, attention, and interaction. • Reliability must be ensured by the registration and monitoring of records and through the execution of project control and procedures for emergency preparedness and response to guarantee regularity when necessary .
5) Checking	• To guarantee that decisions can be made ,monitoring and assessment are required ,including review of conformity with legal and other standards. Dealing with nonconformity ,taking remedial and preventive measures, and assessing the systems in place are all a part of this. • It is nearly impossible to determine whether things are proceeding according to plan without these components and the records that go along with them.
6) Management Review⁽¹⁹⁾	• This demand for management to evaluate the recorded outputs goes hand in hand with the documents from the assessing necessity in order to make sure that actions are moving as planned and to ensure that enough resources are deployed to comply with the requirements.

III. OHSAS 18001 Implementation – Road map^(20,21)

OHSAS18001 Awareness Training Program: Core Team Formation

- Create a safety plan and goals.
- To determine dangers and risks,
- Consider the hazards, probabilities, and effects.
 - Verify that the rules are being followed.
 - Drafting of the OCP, starting the OHSAS handbook, and procedures
 - OCP and procedure finalisation and OHSAS manual completion.
- Checking the Suitability of the Documentation⁽²²⁾
- issuance of OHSAS 18K papers (OCP, etc.).
- The programme for internal auditing
- first internal audit and CA/PA exams.
- Performing the first management review

IV. Performance measurement and monitoring⁽²⁴⁾

A novel integrative approach is taken by including prevention activities into key business processes. This method is sustainable and may be positioned at an organisational level utilising a continuous improvement approach ^(25,26). According to prior studies, incorporating injury prevention into a larger organisational structure and management systems not only results in a workforce that is healthier, safer, and more productive, but it also improves the success and general performance of the organisation ⁽²⁶⁾. A novel integrative approach is taken by including prevention activities into key business processes. This method is sustainable and may be positioned at an organisational level utilising a continuous improvement approach ^(25,26). A larger organisational structure and management systems that incorporate injury prevention not only result in a healthier, safer, and more productive workforce but also improve organisational performance, according to prior studies. ⁽²⁷⁾

V. **Advantages of OHSAS-18001**^(5,9)

There are many advantages of an effective OHSAS management :

1. It provides a well structured approach for managing OH &S.
2. It maintain a commitment to occupational health and safety.
3. It helps to demonstrate a strong commitment to safety excellance.
4. Its excistance ensures a continous improvement culture.
5. It helps in building a strong trust level & communication.
6. It decreaseaccident levels with increased measures of performance.
7. Again it contributes to business by reducing cost and liabilities.
8. Ensures organizational structures in place with clear roles.
9. Measures are based on hierarchy of control measures.

VI. **Disadvantages of OHSAS 18001**⁽³⁹⁾-

- Low productivity.
- Rising legal and insurance costs, and low productivity.
- Someone might sustain severe injuries.
- A high turnover rate and absenteeism among the workforce.
- A poor reputation.

Accidents at work have a high human cost and are bad for the production, earnings, and reputation of construction organisations. Construction businesses develop safety management and include it in their policies, plans, and procedures to control occupational accidents and injuries. On-site injuries and accidents are thought to be inevitable, despite the fact that construction safety has significantly improved over the past few decades. This study intends to investigate how the causes of the safety climate and safety management interact to affect safety performance^(6,31).

VII. Conclusion –

Overall, the findings of the study suggest an innovative strategy for enhancing stakeholders' involvement (commitment) and accountability with regard to OHS procedures in the workplace. By conducting the safety audit and company tendency to lean its real safety assist. demonstrate that the OHSAS 18001:2007 standard recommends the organisation as the principal repository of OHS responsibility.
