Karur

Abstract

All the employees feel high level of job stress. The major cause of their stress is low job security, overload and un proper working schedules. The problems at home also interfere with their job performance and are a cause of job stress. There is high affect of job stress on the general health of employees. Some of them have to work in nights shifts. There are no management programs in organizations for coping stress. In this article briefly discuss the employee problems in the organisation

1.Introduction

Job stress is one of the common problems that employees confront with increasing frequency. Recently job stress is becoming an epidemic in the work environment.

Therefore a large number of researches have focused on job stress and its effects on the various aspects of the organisational outputs. Stress is the reaction that people have to excessive pressure or other types of demand placed on them. It arises when they worry that they cannot cope. The pressures of working life can lead to stress if they are excessive or long-term. Examples of long-term or chronic stress are the fear, frustration and anger that may be the unhappiness of an unsuitable job.

However, if pressure becomes excessive it loses its beneficial effect and becomes harmful.

2.OBJECTIVES

- To find out of the personal information of the employees
- ➤ To identify the main reasons of stress among management people.
- To study the effect of stress on their performance
- To find out level of satisfaction of the employees with the system of performance

3. Review Of Literature

The Review of literature contained in the present chapter focuses on job stress. The chapter specifically highlights research findings on topics related to job stress, personality characterstics, constraints of change, role overload, role conflict, under participation, job difficulty, role ambiguity, environment factors and job satisfication of employees. Sager(1991) defined job stress as a psychological state perceived by individual when faced with demands, constraints, and opportunities that have important but uncertain outcomes. The below started hypothesis this study will be examining the relationship between job stress and job performance.

Miller and Hester (1986) Miller and Hester reviewed stress Management training techniques desensitization (i.e. focusing on environmental factors to reduce anxiety). Miller 91992) also identified aerobic training as a stress management approach. Other approaches have included meditation, muscle relaxation and transcendental meditation

Fletcher(1988) It has been shown how the further down the skill level in the 'job chain' one looks the worse off the mental health of those groups becomes. Further it has also been shown how.... "Conditions of work most adverse to workers" health is to be found in blue collar professions and in some health care positions such as nursing. A common and possibly decisive denominator of these work conditions is that they expose the worker to a combination of high psychological stress and physical workload and a low level of decision latitude."

Brown Er AI(1990) A recent study by Brown Et Al examined the relationship between stressful life events and drinking outcome among male alcoholics who had completed an alcohol treatment program. Approximately 40% of the pre-treatment stressors were found to be directly or indirectly related to alcohol use. Results showed that men who returned to drinking after treatment experienced more serve or highly threatening before their relapse than who. stress men Spector & Connell (1994) As an individual, the issues of 'Locus of Control'(LOC), whereby one may perceive oneself as a victim or an agent of control in one's own life(external or internal LOC), appears to be one of three key personality facts linked to how an individual reacts to stressful situation. The other two are: Negative Affectivity or the tendency to experience a variety of negative emotions across time and situations; and type A personalities who seem to be hyper- reaction to uncontrollable stressors and more reactive than type B.

4.RESEARCH METHODOLOGY

The methodology design used in this project is Analytical in nature the procedure using, which researcher has to use facts or information already available, and analyze these to make a critical evaluation of the performance. We have adopted the Survey Method. In order to carry out with our survey we took a sample of employees from Jeppiaar Cements Pvt Ltd Company Trichy employees asked them to fill up a Questionnaire that was designed in such a way that would help us analyze whether employee performance exist in their organizational framework and whether it has helped them and the organization as a whole or not. Let us now discuss the survey methodology in details.

5.ANALYSIS AND INTERPRETATION

5.1 FREQUENCY

Age Of The Respondent

Table 5.1.1

| | | | | | | | _ | | |
|---|-------|----------|-----------|---------|---------------|-----------------------|----|--|--|
| | | Age | | | | | | | |
| | | | Frequency | Percent | Valid Percent | Cumulative Percent | | | |
| | Valid | Below 20 | 35 | 23.3 | 23.3 | 23.3 | | | |
| J | 4 | 20 to35 | 45 | 30.0 | 30.0 | 53.3 | | | |
| | 9) | 36 to 50 | 48 | 32.0 | 32.0 | 85.3 | 13 | | |
| | ¥ | Above 50 | 22 | 14.7 | 14.7 | 100.0 |) | | |
| | | Total | 150 | 100.0 | 100.0 | * | | | |

Interpretation

From the table reveals that 23 % of respondents belong below 20,30% of the correspondents belong to 20 to 35, 32 % of the respondents below 36 to 50,14.7% of the correspondents belong to above 50, Majority 32% of the correspondts belong to the 36 to 50.

Gender of the Respondent

Table 5.2

| | Gender | | | | | | | | | |
|------------|--------|-----------|---------|---------------|-----------------------|--|--|--|--|--|
| | | Frequency | Percent | Valid Percent | Cumulative Percent | | | | | |
| Valid male | | 79 | 52.7 | 52.7 | 52.7 | | | | | |
| | female | 71 | 47.3 | 47.3 | 100.0 | | | | | |
| | Total | 150 | 100.0 | 100.0 | | | | | | |

Interpretation

From the table reveals that 52.7% of respondents belong to Male, 47.3% of the respondents belong to Female, Majority 52.7% of the respondents belong to the Male

Marital Status of the Respondent Table 5.3

| | 83 | Ma | arital Status | S | |
|-------|-----------|-----------|---------------|---------------|-----------------------|
| | | Frequency | Percent | Valid Percent | Cumulative Percent |
| Valid | Married | 89 | 59.3 | 59.3 | 59.3 |
| | Unmarried | 61 | 40.7 | 40.7 | 100.0 |
| | Total | 150 | 100.0 | 100.0 | |

Interpretation

From the table reveals that 59.3% of respondents belong to Married, 40.7% of the respondents belong to Unmarried, Majority 59.3% of the respondents belong to the Married.

Educational qualification of the Respondent

Table 5.4

| | Education Qualification | | | | | | | | | |
|-------|-------------------------|-----------|---------|---------------|-----------------------|--|--|--|--|--|
| | | Frequency | Percent | Valid Percent | Cumulative Percent | | | | | |
| Valid | School | 17 | 11.3 | 11.3 | 11.3 | | | | | |
| | Graduate | 37 | 24.7 | 24.7 | 36.0 | | | | | |
| | Post Graduate | 67 | 44.7 | 44.7 | 80.7 | | | | | |
| | Others | 29 | 19.3 | 19.3 | 100.0 | | | | | |
| | Total | 150 | 100.0 | 100.0 | | | | | | |
| | | | | | | | | | | |

Interpretation

From the table reveals that 11.3% of respondents belong to School, 24.7% of the respondents belong to Graduate, 44.7 % of the respondents belong to Post Graduate, 19.3% of the respondents belong to others. Majority 44.7% of the respondents belong to the Post Graduate.

Monthly Income of the Respondent Table 5.5

| X | Monthly Incon | ne of the Resp Table 5.5 | oondent | | CRI |
|-------|------------------|-----------------------------|-------------|---------------|-----------------------|
| | | Mo | nthly Incor | me | |
| | | Frequency | Percent | Valid Percent | Cumulative Percent |
| Valid | Below 10,000 | 27 | 18.0 | 18.0 | 18.0 |
| | 10,000 to 20,000 | 46 | 30.7 | 30.7 | 48.7 |
| | 20,000 to 30,000 | 48 | 32.0 | 32.0 | 80.7 |
| | Above 40,000 | 29 | 19.3 | 19.3 | 100.0 |
| | Total | 150 | 100.0 | 100.0 | |

Interpretation

From the table reveals that 18.0% of respondents belong to Below Rs10,000, 30.7% of the respondents belong to Rs 10,000 - 20,000, 32.0% of the respondents belong to Rs 20,000-30,000, 19.3% of the respondents belong to Above Rs 30,000. Majority 32.0% of the respondents belong to the Rs 20,000 - 30,000.

Experiance of the Respondent

Table 5.6

| | Experience | | | | | | | | | |
|-------|--------------|-----------|---------|---------------|-----------------------|--|--|--|--|--|
| | | Frequency | Percent | Valid Percent | Cumulative Percent | | | | | |
| Valid | Below 1 year | 34 | 22.7 | 22.7 | 22.7 | | | | | |
| | 1-2 year | 36 | 24.0 | 24.0 | 46.7 | | | | | |
| _ | 2-3 year | 45 | 30.0 | 30.0 | 76.7 | | | | | |
| | Above 4 year | 35 | 23.3 | 23.3 | 100.0 | | | | | |
| | Total | 150 | 100.0 | 100.0 | | | | | | |

Interpretation

From the table reveals that 22.7% of respondents below 1 year experience, 24.0% of the respondents belong to 1-2 Year Experience, 30.0% of the respondents belong to 2-3 Years Experience, 23.3% of the respondents below above 4 years Experience. Majority 30.0% of the respondents belong to the 2-3 Years Experience.

Salary of status of the Respondent

Table 5.7

| | Salary Status | | | | | | | | | | |
|-------|---------------|-----------|---------|---------------|-----------------------|--|--|--|--|--|--|
| | | Frequency | Percent | Valid Percent | Cumulative Percent | | | | | | |
| Valid | Daily | 23 | 15.3 | 15.3 | 15.3 | | | | | | |
| | Weekly | 43 | 28.7 | 28.7 | 44.0 | | | | | | |
| | Monthly | 84 | 56.0 | 56.0 | 100.0 | | | | | | |
| | Total | 150 | 100.0 | 100.0 | | | | | | | |

5.2 CORRLEATION ANALYSIS

Correlation between Poor relations with supervisor Tabulation

Table 5.8

| | | Corr | elations | | | |
|-----|---------------------|--------|----------|--------|--------|--------|
| | | EI1 | EI2 | EI3 | EI4 | EI5 |
| EI1 | Pearson Correlation | 1 | .453** | .255** | 218** | 388** |
| | Sig. (2-tailed) | | .000 | .002 | .007 | .000 |
| | N | 150 | 149 | 150 | 150 | 150 |
| EI2 | Pearson Correlation | .453** | 1 | 006 | .292** | 237** |
| | Sig. (2-tailed) | .000 | | .945 | .000 | .004 |
| | N | 149 | 149 | 149 | 149 | 149 |
| EI3 | Pearson Correlation | .255** | 006 | 1 | 095 | .105 |
| | Sig. (2-tailed) | .002 | .945 | | .249 | .199 |
| | N | 150 | 149 | 150 | 150 | 150 |
| EI4 | Pearson Correlation | 218** | .292** | 095 | 1 | .266** |
| | Sig. (2-tailed) | .007 | .000 | .249 | | .001 |
| | N | 150 | 149 | 150 | 150 | 150 |
| EI5 | Pearson Correlation | 388** | 237** | .105 | .266** | 1 |
| | Sig. (2-tailed) | .000 | .004 | .199 | .001 | |
| | N | 150 | 149 | 150 | 150 | 150 |

^{**.} Correlation is significant at the 0.01 level (2-tailed).

Interpretation

From the calculated person's statistics it can be summarized that as p-value 0.000 < 0.01 there is significant relationship between total values of statement Correlation relationship expressed by r value, N - value is .150,149 and .255 (+ve) which shows the positive relationship. There is a negative relationship between E4 & E5 (-.038)

Correlation between Poor relations with workmates Tabulation

From the calculated person's statistics it can be summarized that as p-value 0.000 < 0.01 there is significant relationship between total values of statement Correlation relationship expressed by r value, N - value is 1,.652 and .337 (+ve) which shows the positive relationship. There is a negative relationship between Jp5 and jp4 (-0.74,-415)

^{*.} Correlation is significant at the 0.05 level (2-tailed).

6. SUGGESTION AND CONCLUSION

To successfully attract and relieve job stress among the employees the organizations need to examine their programs and policies for coping stress – to see where they stand compared to other companies. By employing and implementing various management programs to relieve stress, the organizations can cope with job stress among their employees. The following strategies are important to remember while making stress coping programs:

- Proper work schedule should be there
- Ensure high job security to the employee
- There should some employee fitness programs and setting of health clubs
- The boss should show interest in the work of employee. There should be friendly and supportive relation between the boss and the employees. There should be an informal meeting between boss and employees in a month so that they can discus about the work performance. The boss should give positive motivations to employee for his/her good performance.

The major cause of their stress is low job security, overload and un proper working schedules. The problems at home also interfere with their job performance and are a cause of job stress. There is high affect of job stress on the general health of employees. Some of them have to work in nights shifts. There are no management programs in organizations for coping stress. Most of the engineers believe that it is necessary that the organization should provide some management programs to cope with stress.
