**Cashless Transaction:**

The cashless transaction are the methods of financial transaction like cashless payment etc. it is also called as a digital transaction which compels the merchant to accept the digital money. The cashless transaction done through prepaid payment instruments like smart card, magnetic strip cards, net wallet, mobile accounts etc. there is Purchasing goods from e-commerce websites, signing of business contracts through online mode, or even buying movie tickets through smartphone applications are all fall under the umbrella of digital transactions or cashless transactions.

**Benefits of cashless transaction:**

The cashless transaction offers various benefits to not only to the customer but also to the financial service providers and economy as a whole. The cashless transaction helps in the utilizing the technology in a best manners and for right purpose so the usage of smart phones will increase thereby increase in the demand and production of smart phones in India. Along with this it also helps in the reduction in the cash circulation in the economy. Having cash in physical for tenders various loss to the parsons. It also help sin the saving in the cost of printing currency. Recently various payment instrument started offering discount and cash back if they make digital transaction.
Conclusion:
The cashless India program is the flagship program under Digital India schemes. It is welcome steps which facilitate the smooth financial transaction with the help of various applications. There are various methods of cashless transaction but the people have less awareness about the working of all these methods. Still most of the people use physical money for the financial and non-financial transaction. Further there is a need to provide the cyber security to the transaction and it has to be promoted at wider level so that all people will get the benefit of it. It is recommended that, the government shall come up with proper regulatory system for the cashless economy, including payment systems protection from the cyber-attacks to the electronic system.
