Abstract: The objective of this study is to formulate and evaluate poly-herbal shampoo for cosmetic purpose from herbal ingredients. Hibiscus powder, Neem powder, Henna powder, Amla powder, Shikakai powder, Ritha powder, Alo-vera gel was procured from local market in powdered form also gel form Banyan root powder and Soya milk is prepared by homemade method, then prepared decoction of these ingredients and mixing with each ot<mark>her and evaluated</mark> for it'sorganoleptic and physico-chemical characteristics. Herbal shampoo is used to cleansing of the hair also conditioning, smoothing, of the hair surface, good health of hair, hair free of dandruff, dirt grease and lice above all, it's safety benefits are expec<mark>ted. The advantage of herbal cosmetics is their non-toxic nature, reduce the allergic reactions and</mark> time tested usefulness of many ingredie<mark>nts. Thu</mark>s in prese<mark>nt work, w</mark>e fo<mark>und good prop</mark>erties for the herbal shampoo and further optimization study benefits of herbal shampoo on human use as cosmetic product.

Keywords: Cosmetic, Herbal shampoo

1. Introduction

"Shampoo is the cleansing preparation of the hair and scalp."

Though there are different types of skin cleansers, but the hair cleansing, nourishing, and protecting the skin. cleansing preparations can be grouped into only one categor. It have not make the hand rough and chapped. and are called as shampoo. They are basically water based It's not give any side effects or causes irritation to the eye. products containing mainly surfactants. 2it's Primary function is It produces a good amount of foam to satisfy the of cleansing the hair of accumulated sebum, scalp, debris and psychological requirements. residues of hair grooming preparations. The herbal shampoo although better in performance and safer than the synthetic ones will be popular with consumers.

Importance of this formulation

• The selection of active ingredients for hair care shampoo is often based on the ability of the ingredient to prevent damage to skin as well as to improve the quality of the skin by way of

Table 1: Ingredients used in formulation

able 1	Die 1: Ingredients used in formulation						
Sr. No	Constituents	Biological source	Family	Uses	Images		
1.	Hibiscus leaf	ves of Hibiscusrosea	Malvaceae	ents hair loss and hair growth promoter.	Charge Visit States Co.		
2.	Henna leaf	Dried leaves of Lawsoniainermis	Lythraceae	Growth of hair, conditioner.			
3.	Neem leaf	Dried leaves of Azadirachtaindica	Miliaceae	the dryness of hairs and flaking of hairs.	Neem Powder		
4.	Amla fruit	Dried ripe fruits of Embelicaofficinalis	Euphorbiaceae	ening of hairs and hair growth promoter.	Handberg and American State of the Control of the C		
5.	Shikakai fruit	pods of Acaciaconcinna	Mimosaceae	Foam base and anti dandruff.			
6.	Ritha fruit	Dried fruits of Sapindusmukorossi	Sapindaceae	Detergent and antidandruff.			
7.	Alovera leaf	Dried leaves of Aloe barbadensis miller	Liliaceae	and moisturizingeffect.			

Objectives

- 1) To formulate the herbal shampoo.s
- To evaluate the herbal shampoo.
- 3) The part used for formulation is leaves, fruits and root.
- 4) To reduce side effects of chemical formulation.
- 5) To improve hairs texture.
- 6) To darkening the hair color.
- 7) To imparting gloss to hair and to maintain their manageability and oiliness for hairs.

Preparation

e 2. I official of heroal shampoo							
Sr. No.	Constituents	Part of plant	used	Quantity (100 ml)			
1.	Hibiscus powder	Leaves		5 gm			
2.	Neem powder	Leaves		5 gm			
3.	Henna powder	Leaves		5 gm			
4.	Amla powder	Fruits		10 gm			
5.	Shikakai powder	Fruits		15 gm			
6.	Ritha powder	Fruits		15 gm			
7.	Alovera gel	Leaves		10 ml			
8.	Banyan powder	Roots		5 gm			
9.	Soya milk	Seeds		20 gm			
10.	Gaur gum	Seeds		1 gm			
11.	Sandalwood	Wood		5 gm			
12.	Almond	Fruits		4 gm			

Preparation method of herbal shampoo:

Decoction Method:

Weghied all the ingredients according to the formula.

Decoction of Hibiscus, Henna, Neem, Amla, Banyan root powders, Alovera gel, Soya milk was prepared in one part of water.

Filter it, by using muslin cloth. Collect filtrate.

Decoction of Shikakai, and Ritha was prepared in another part of water.

Filter it by using muslin cloth. Collect filtrate.

Mixed to each other of above filtratewith constant stirring.

Mixed gaur gum as a thickening agent for maintenance of consistency of herbal shampoo as like semisolid nature. Preservatives and perfume was added lastly.

Figure 1: Formulation of Herbal Shampoo

Evaluation of Herbal Shampoo:

To evaluate the prepared formulations quality control tests including visual assessment and physicochemical controls such as pH and viscosity were performed. Also to assure the quality of products, specific tests for shampoo formulations including the determination of dry residue and moisture content tests were carried out. The results were compared with marketed formulations.5

Physical appearance /visual assessment

The formulations prepared were evaluated in terms of their clarity, foam producing ability and fluidity.

Determination of pH

The pH of shampoo solution in distilled water was determined at room temperature by using pH paper.

Determine percent of solids contents

A clean, dry evaporating dish was weighed and added 4 gram's of herbal shampoo to the evaporating dish. The exact weight of the shampoo was calculated only and put the evaporating dish with shampoo was placed on the hot plate until the liquid portion was evaporated. The weight of the shampoo only (solids) after drying was calculated.

Rheological evaluation

The viscosity of the shampoo was calculated by using viscometer. The viscosity of the shampoos was measured with the temperature and sample containers size was kept constants during the study.

Dirt dispersion

Two drops of shampoo were added in large test tube contain 10 ml of distilled water. One drop of ink was added in the test tube, was stopped and shake for ten times. The amount of ink in the foam was estimated as none, light, moderate or heavy. [1] A. N. Kaila, Textbook of industrial Pharmacognosy, CBS

Skin sensitization test

This test is performed on skin of human volunteers and checks edition, VallabhPrakashan 2003: 1-10,110-121. whether it irritation on skin or not.

Stability test

color) of formulations during the storage period of 2 months indicated that they are chemically and physically stable.

Foaming ability and foam stability

Cylinder shake method was used for determining foaming ability. 50 ml of the 1% shampoo solution was put into a 250 ml graduated cylinder and covered the cylinder with hand and shaken for 10 times were recorded. The total volumes of the foam contents after 1 minute shaking. The foam volume was calculated only. Immediately after shaking the volume of foam at 1 minute intervals for 4 minutes were recorded.

Nature of hair after washes⁶

Nature of hair after wash can be done by collecting the responses of volunteers

Table 3: Result and Discussion

Sr. No	Evaluation tests	Results obtained		
1.	Physical appearance	Dark brown, good foaming		
2.	pН	5		
3.	Percent of solids contents	3.8%		
4.	Rheological evaluations	1.84 cps		
5.	Dirt dispersion	Light		
6.	Skin sensitization	No irritation on skin		
7.	Stability test	Stable after two months		
8.	Foaming ability and Foaming stability	50 ml		
9.	Nature of hair after washes	Soft manageable		
9.	Nature of fiair after wasnes	Soft manageable		

2. Conclusion

The formulated shampoo were not only safer than the chemical conditioning agents, but also greatly reduce the hair loss during combining as well as strengthens the hair growth. The pH of the shampoo was adjusted to 5, to retain the acidic mantal of scalp. The physicochemical approach used for preservation of the formulations to avoid the risk posed by chemical preservatives. However, the aesthetic attributes such as lather and clarity of the laboratory shampoo are not comparable with the marketed shampoos. The foam volume is one par.

In the present scenario, it seems improbable that herbal shampoo, although better in performance and safer than the synthetic ones, will be popular with consumers. Formulaters must play an active role in educating the consumers about the potential harmful effects of synthetic detergent in shampoos. There is a strong need to change the consumer perceptions of a good shampoo and the onus lies with the formulaters.
