Abstract

The present study focuses upon identifying the determinant of organizational effectiveness with focus on the emerging concept of entrepreneurial leadership. It was hypothesized that executives and non-executives would differ significantly with each other on the variables under study. There would be a significant positive contribution of attributes of entrepreneurial leadership on organizational effectiveness irrespective of organizations' typology. The sample of 150 respondents from both public and private organizations working in the manufacturing sector in Tamilnadu participated in the study. The findings of the study reveal that executives and non-executives of both organizations differ significantly on directed discovery, creative integration of networks and arena building. The quantum of difference in employees of private organizations was low. The findings are important to design interventions on entrepreneurial leadership attributes for enhancing organizational effectiveness.

Keywords

Organizational effectiveness, Entrepreneurial leadership, Creative integration of networks Introduction

The emergence of globalization and liberalization has led to changes in the functioning of various organizations. It has a substant of the control of the co snotonlyledtoseverecompetitionamongorganizationsratherithasmadetheorganization's life span shorter. In order to extend their existence the organizations need to adopt innovations in their work practices to make their processes efficient and effective in the future. These innovations have alsoled to the growth of newer areas of knowledge management, and information technology management as a tooltosucceed and survive. Inthiscontext, the role of leaders is critical for success of any organization.

Inthechangedbusiness scenariowhere organizations are required to compete globally, benchmarking of organizations are required to compete globally. ional practices has also become vital. Organizational survival requires not only meeting but also setting global standards. Organizations, therefore have to react fast to learn from their experiences and aimtowards world - class excellence through constant learning and innovation. achieving above businessenvironmentchallengepropelsustounderstandthecriteriaoforganizationalsuccessandexcellence.

LITERATURE REVIEW

Leadership Style: Most of the leadership researches for the past several decades have defined leadership as theability of the person to influence another group without using force towards the achievement of goals. TheleadershipstudiesbeganwithOhioandMichiganresearchin1930's.Inlasttwodecades,typologyofleadership evolved into transformational and later into visionary leadership.

Beginningof21stcenturyshifteditsfocusonentrepreneurialleadership(EL)withopeningofworldeconomy and ensuing challenges (Coglister and Bringham, 2004; Ireland, Hitt and Sirmon, 2003; Research on EL began with Cunningham and Lischeron(1991)whopositedthatELinvolvessettingcleargoals, creating opportunities, empowering people. preservi ng organizational intimacy, and developing HR systems.

These conddimension of entrepreneurial leadership is creative integration, organizing and optimally utilizing human, as well as, non- human resources for achieving the targets / goals. This effort leads toreducing the temporal or spatial in efficiencies, the rebyadding value to the organizations (Shane and Venkataraman, 2000). There are two basic elements to account for it. One is, 'defining gravity' that is based on the intellectual stimulation, enthusiasm, positive attitude, and integration. Hence, it is important to specify thereal limiting constraints. The other is 'path clearing', is like removing the roadblock from the way forsuccessoftheir peoplethroughimprovement orientation, encouragement and teamorientation.

The third dimension of entrepreneurial leadership is arena building wherein the leader has to focus on thenew product development or searching new avenues for their organization. This has been emphasized bySchumpeter (1934) as innovative role of an entrepreneur in discovering new business opportunities. It iscapturedthroughself-reliance, risk taking and self-interest within the leader.

Later studies, explained EL where leader is good at identification of opportunities (Chen, 2007; Kuratko, 2007; risk taking beyond security (Kuratko, 2007); sustaining innovation and adaptation in high velocity and uncertainen vironment (Surieand Ashley, 2008).

The Goals of the present study

- a) To investigate whether any significant difference exists between the executives and non-executives of manufacturing industries with respect to entrepreneurial leaderships tyle, and organizational effectiveness.
- b) To assess relationship between entrepreneurial leadership style and organizational effectiveness.

HYPOTHESES

The following hypotheses were formulated:

- Therewould be significant difference between the executives and nona) executives on their perception of entrepreneurial leaderships tyle and organizational effectiveness.
- Therewouldbeapositiverelationshipbetweenentrepreneurialleadershipstyleandorganizationaleffective b) ness.

METHOD

Sample Selection

One fifty executives and non-executives from both private organizations in manufacturing sector in Tamilna duwere selected as respondents forthe present study using stratified random.

SamplingTechnique.

ResearchTools

Forunderstanding, the variable sunderstudy following tools were used:

- a) EntrepreneurialleadershipStyleinventory.
- b) Organizational effectiveness Inventory.

RESULTS

1.The significant difference on various dimensions of entrepreneurial leadership style, work culture, empowerment, and organizational effectiveness between types of employees (executives and non-executivescategory)ofpublicsectororganizationsat0.05levelsofsignificanceandbelow.Thenon—executives' scores were comparatively higher than executives were. They perceived higher degree of creativeintegration.Similarly,executivesandnon-executivesdifferonlyontheirperceptionofexistenceofentrepreneurialleadership style in their superior.

- 2. The significant difference on organizational effectiveness between types of employees (executives and non-executives category) of private sector organizations at 0.05 levels of significance. The non-executives's cores were comparatively higher than executives. They perceived higher degree on entrepreneurial leadership of their superiors, whereas executives were high on perceiving organizational effectiveness.
- 3. The significant difference on various dimensions of entrepreneurial leadership between publicandprivatesectororganizationsatp<0.05levelsofsignificanceandbelow. The private sector employees cored comparatively higher than the public sector employees on directed discovery and creative integration. They perceived higher degree of creative integration and discovering new and innovative thinking of their superiors. The private sector employees also perceive higher entrepreneurial leadership style in their superiors.

4.shows that relationship between organizational effectiveness and dimensions of entrepreneurialleadership for both public and private sector organizations, are positively related with some dimensions of entrepreneurial leadership style which are significant at p<0.01. Although arena building is slightly negatively related in both public (r=-0.012) and private (r=-0.030) sectors respectively.

Conclusion

Comparison of Types of Employees of Both Public and Private Sector Organizations

Inpublicsectororganization, executives and nonexecutives were found to differ significantly on various dimensions of entrepreneurial leadership style and effectiveness. One of the organizational reasons the executivesarehavinghigherscoreonperceptionofanentrepreneurialleadershipattributesbecausetheyfeelthattheiri mmediate bosses or departmental heads are competent than the executives who perceive their bosses ascompetent to deal with emerging challenges. The other reason is, the non – executives are looking inrelationtosmallreferencegroup, while executives may be looking at broader perspectives and horizon. Sometimes it alsohappensthatiftheirsubordinate'sratebossesasgood,theymayalsobeconsideredasgood. Therefore, these differe ncesbecomerelativeinnature. This is also true for other outcomes on the dimensions of entrepreneurial leadership liked irecteddiscoveryandcreativeintegration. The executives are feeling motivated and this motivation gets reflected in hi

gherdegreeofcreativeintegrationleadingtohigherinvolvementofpeopleinorganizingavailableresourcesforthema

ximumadvantageoftheorganization. Theother feature of creative integration is mobilizing people and network of relationship resources to create as wellas, helpingpeopleinachievingtheirgoals (McGrathand MacMillan, 2000). [37]

Thismaybetruebecauseoftheintroductionoftotalqualitymanagementconceptsintheseorganizationswheretherole of every member becomes important specially the non-

executives. This contradicts the belief softhe executives that they will lose their power to the non-executives and will become just the rubber seal for various organizational activities. Public and private sector organizations differ significant lyon directed discovery and creative integration dimension of entrepreneurial leadership. These differences are emerging due to the differences in the perce ptionoftheemployeesofprivatesectororganizationwhoviewtheirtopmanagementleadersalwaysdirectedonidentif yingnewwaysandmeanstogenerateprofitabilityandproductivityalongwiththeexpandedcustomerbase. This is not s oincaseofpublicsectororganizationsunderstudyastheybelongtoheavyengineeringcategoryhaveidentifiedcustom ersandafocusedmarketdriventechnology. Theotherreasonthatisattributabletothisdifferenceisconcernforincrease dinnovationand quality initiatives, with emphasis on reduction of costs. This is possible only if the leader has an entrepre neurialmindset. The present findings corroborates the pastrese archby Guptaetal. (2004) that entrepreneurial leaders mustoperateinahighlyunpredictableatmosphereinwhichcompetitiveadvantagemaydissolveanytime.

CONCLUSION AND FUTURE RESEARCH

Based on the above findings, we conclude that organizational effectiveness depends upon entrepreneurial leadership attributes inherent in the work force. In future, this study should be extended to include otherorganizationalvariableslikeorganizationalcitizenshipbehaviour, culture and structuralissuesmorespecifically in Indian context, where the business environment has changed overtime and core competence hasbecome the order of the day. As this study focuses upon the cohort group comparison, it would have beenappropriatetoconductlongitudinalstudiestounderstandtheimplicationsofchangesinentrepreneurialleadershi pstyleand theway organizations excel.
