Entrepreneurship Education and its effect on entrepreneurial intention among Managements students

Dr. R. R. Chavan
1 Asst. Professor, School of Management Studies, North Maharashtra University, Jalgaon,

Abstract:
Entrepreneurship education is familiarised into Indian educational system to provide the necessary skills, competence, understanding, and infusing entrepreneurial competencies in management graduates. The entrepreneurship education is prerequisite for entrepreneurial intent among management students. This paper examines the effect of entrepreneurship education on entrepreneurial intention among management students of North Maharashtra University. The data is collected through self-administrated questionnaire. The simple percentage ranking, correlation and regression analysis techniques were used to analyse the data. It was identified that entrepreneurship education is has positive effect on entrepreneurial intention among Managements students. This study recommends that students should be inspired beyond entrepreneurship training projects to business ventures start-ups at micro and small-levels.

Keywords: Entrepreneurship education, entrepreneurial intention, management students.

JEL classification: I23, M13

I. Introduction
Entrepreneurship education has a positive impact on the entrepreneurial mind-set of young people, their intentions towards entrepreneurship, their employability and finally on their role in society and the economy. Entrepreneurial skills and competences should start being developed at a young age. Entrepreneurship education should be considered a priority at early levels and should focus on soft skills, including entrepreneurship awareness and the development of entrepreneurial behaviours.

UNESCO (2008) stated that entrepreneurship education is all kinds of experiences that give students the ability and vision of how to access and transform opportunities of different kinds. It goes beyond business creation. It is about increasing student’s ability to anticipate and respond to societal changes. It is seen by UNESCO as education and training which allows students to develop and use their creativity and to take initiatives, responsibility and risks.

The overview of impact studies in entrepreneurship education strongly indicates a positive impact of entrepreneurship education, with 33 studies reporting a positive impact, six with mixed results, and only two reporting a negative impact of entrepreneurship education. The positive impact of entrepreneurship education is further complemented by meta-studies of entrepreneurship education (Bechard et al., 2005; Dickson, Solomon, & Weaver, 2008; Mwasalwiba, 2010; Pittaway et al., 2007). In general, there was a significant and positive correlation between participation in educational programs and selection into entrepreneurship” (Dickson et al., 2008: 245) or "Although most studies vary in terms of approach and theoretical orientations, their results seem to conclude that entrepreneurship education has some positive impact on students" (Mwasalwiba, 2010: 35).
II. Research Objectives:

This research work aims to analyse the effect of entrepreneurship education on entrepreneurial intentions among management students of North Maharashtra University.

III. Review of Literature

Entrepreneurial intention is a desire doing productive activities effectively that directing individuals to utilize and implement relevant concepts of new business (Krueger et al., 2000). Students’ awareness is able to be influenced and developed by external factors in terms of entrepreneurship education that underlie the emergence of their entrepreneurial intentions. This perspective can be seen from the Theory of Planned Behavior as mentioned by Ajzen (2005) stating that the intention was affected by a person's behavior. The entrepreneurial intention is not inherited, but it can be trained and developed through education. It is in line with Athayde (2009) point of view that entrepreneurial attributes can be positively shaped by the educational programs that build students awareness about entrepreneurship as a career option.

Previous studies have been conducted by scholars in the area of entrepreneurship education. It is a study that aims to stimulating students’ intentions as well as challenging students to establish new businesses as future career choice. Research findings (Kuttim et al., 2014; Kim-Soon et al., 2016) showed that participation in entrepreneurship education has a positive effect on students’ entrepreneurial intentions. There is a significant relationship between entrepreneurial intention and entrepreneurship education (Hussain & Norashidah, 2015; Lorz, 2011; Hattab, 2015; Ibrahim et al., 2015), through students’ involvement in experiential and existential lifelong learning practices (Robinson et al., 2016), and through developing meaning of action, reflections, and experience (Hagg & Kurczewska, 2016). Moreover, the role of entrepreneurship education delivered to students is able to improve their achievement orientation, personal control, and self-esteem (Basardien et al., 2016).

IV Methodology

The study used descriptive survey design. A total of 200 final year management students were drawn from affiliated management colleges of North Maharashtra University. These category of students were chosen because they are about to face their professional career choice and they belong to the highest entrepreneurial inclination segment of the population. To achieve the objective of the research, data were collected through a questionnaire. The questionnaire is constructed based on scale which is adopted from the study of AFOLABI, Michael Oluseye et al. published in the Journal of Education and Practice. Two experts carried out the face and content validations of the instrument. The reliability coefficient of the questionnaire by test-retest was 0.78. The questionnaires were administered to all the sampled students by the researchers. Frequency counts and percentages were used to analyse the data and answer the research questions.

A total of one hundred and thirty-six (272) questionnaires distributed, out of which one hundred and eight (216) completed and returned; however, sixteen out of the returned questionnaires disqualified because they were not duly completed as required. Thus, the number of questionnaire used for this purpose of analysis is one hundred (200).

This shows that (0.9822) of the respondents’ response is positive, it signifies that entrepreneurship education has strong positive relationship with the entrepreneurial intention among management students of North Maharashtra University.

VI. Conclusion and Implications:

The result discovered that entrepreneurship education has substantial effect on entrepreneurial intention among management students of North Maharashtra University.

Therefore entrepreneurship programs should be promoted both in and outside of the management institution setting, giving a wider range of students’ exposure to entrepreneurial knowledge. Entrepreneurship education is an imperative that could make a positive contribution to improving the entrepreneurship orientation of students, leading to the acquisition of skills, creativity, confidence, drive and courage to create employment for self and others. Entrepreneurship education makes education and training to be functional and useful to individuals and the nation at large. It tackles the problems of graduate unemployment, idleness and all other vices associated with them. So, it is recommended that Entrepreneurship education should be included in the curricula of all educational institutions at all levels in India. Entrepreneurship education has positive impact on all students exposed to it and their attitude towards self-employment.

Therefore in order to foster entrepreneurship among management students, the researcher intent to propose the following training activities so that entrepreneurship may be infused in the minds of management students.

- Encourage students to interface with entrepreneurship through start-up exhibitions of successful entrepreneurs. These role models represent a way of showing students an example of the validity of their project, so that they can envisage it realistically and believe that it can be carried out.
It is necessary to conduct idea generation workshops by using brainstorming technique for the development of innovative projects, so that they may be subsequently analysed and the results discussed.

EDP workshops majorly focusing on Business plan creation activity should be initiated.

VII. Limitations and Future scope of research

Despite its contributions, this study is not without limitations which future research should bear in mind. Firstly, the use of a closed, structured questionnaire makes it impossible to explore in greater depth the nature of causal relations something which is accentuated in cross-sectional studies. In addition, the sample only consists of management students from one University in India, so that the conclusions obtained cannot be generalized to other groups of students, particularly those who have opted for a degree in Management. Future research should use new and more diverse samples. Therefore call for further primary studies to contribute to these research areas so that more accurate conclusions can be drawn.
